

UTX[®] KAFOs

 **BECKER**
CENTRAL FABRICATION

Models

The UTX is a line of custom KAFOs that consists of three primary models.

- SWING - Stance Control
- FREE - Free Motion
- STABIL - Locked with Manual Button Release

Indications

- Stance control users will typically have hip extensor/flexor strength (Grade 3) and passive ankle dorsiflexion (SWING)
- Valgus or varus knee and ankle instabilities, or when additional support in the coronal plane is required (all models)
- Genu recurvatum, or quadriceps insufficiency (SWING & STABIL)

Patient Benefits

- Lightweight
- Comfortable to wear while sitting
- Optimal pressure distribution
- Can be worn fully underneath clothing
- Designed to limit wear on clothing

Practitioner Benefits

- Less time fitting due to low profile structure and fewer contact areas
- Reliable and virtually maintenance free

Options

Frontal Plane Control

A resist cable can be added to manage Valgus or varus knee instabilities

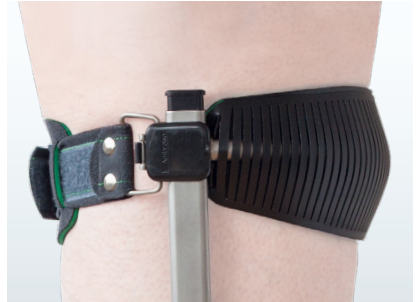

Genu Recurvatum Control

UTX bands can be mounted anteriorly or posteriorly to help manage genu recurvatum

Foot Ankle Control

A custom AFO can be incorporated to address foot drop and varus/valgus ankle instabilities

Manual Button Release

All UTX stance control and locked KAFOs come equipped with a manual button release
